B5developed , I would like to highlight a very important missing feature /function in this first version under " Send a request " which is (Area or Neighborhood), this felid should be the third felid to fill by a user sending a request after " Country " & " City ", and for this particular field the user can choose from a list or uses the MAP feature.
(Kindly review the old version you have)

Comments :
1- the name of " Send request " will be changed to " Find Property" with the same functionality

2- the font in the main page need to be bigger and bold, also the font in the inbox and news feed need to be bigger a bit, it's hard to read, let's make the font a standard font and size through out the app

3- when going from one section to another, I think we need an arrow to bring you back one step without changing the page, just to get back to the same point you were in,

4- we should modify the color of the logo a bit, maybe the house in the logo can be white and the blue background could be a bit darker, or sold blue, the logo when you start the app for the first time should be bigger, (to be discussed in the con-call)"

5- the response of each request should come under the request itself, I think it will be easier to refer to each request ,(just like the old virgin).

6- The word " MAP " to be written under or above the sample of the map, the functionality of the map is to choose from it the neighborhood of the property the user trying to send a request for.

7- also by clicking to call any agencies and when you finish you should return to the app right away and no need to open the app again and start all over, also works with the email, when you sent the email you should return normally to the point when you left,

8- by starting the app you only have 2 seconds to see the name and the logo, I would like to increase the time to 5 or 6 seconds, the logo appears with statement or a slogan such as, Real Estate Information in your Hand, or something else we can come up with later,

9- in the " news feed " page , each news feed has to have 2 lines instead of one (before click on it) in the 1st line the name of the real-estate company , in the 2nd line the property type and the price, when the user clicks it ,it open up the same way you did but instead of having the 4 clicks which are 1. Real-estate profile 2. Map 3. Facebook 4. Twitter we need it to be changed to the followings :-

1. Real-estate profile
2. Map
3. Phone call
4. Share this news (if the user clicks this one he will have a list of apps where he can share this news to , like (Facebook , Twitter, What's app , SMS, email … ets)
